Finding and Solving the Library

Name:

Date: __________/________/________

Today we’re going to do an activity designed at helping you find your way in the library and getting information for your paper. To do so, simply follow the two steps below:

**Step One**
Over the next twenty minutes, locate a text that you want to use using Pegasus, which is located at http://pegasus.library.ucsb.edu/F/?func=find-b-0.

Write down the author and title down below. Make sure that the text is something that works with your research.

**Step Two**
After finding a text, take a look at the works cited or notes section. Find another that is listed in that text. Be sure to check out your book and the other text. Write down the author and title down below. Make sure that the text is something that works with your research.

**Step Three**
We’ll talk about the process. If you end up having problems, then come find Chris in the computer area. Also, start reading and researching if you are done earlier. We will be meeting before class is dismissed in the area that Chris mentioned before we began all of this.
